I am an AI/ ML python developer with 3 years of experience and a strong background in creative innovative solutions using machine learning and artificial intelligence with hands-on experience in developing voice AI calling platforms and LLMs, I have contributed to significant productivity enhancements and sales optimizations. My commitment to continuous leaning drives me to refine and innovate systems for better performance.

Education

Dr. A.P.J Abdul Kalam Technical University (AKTU) ***August 2020 - June 2024***
Bachelor of Technology in Artificial Intelligence & Machine Learning (CGPA of 8.6) *Uttar Pradesh, India*
General Raj's School *Hauz Khas, Delhi*
Intermediate (Score – 84%)

Experience

Complia Services Limited **Oct 2024 - Present**
AI/ML Python Developer *New Delhi, India*

- Developed a voice AI calling platform that increased cold call sales leads by 30% and built AI-driven automations for social media comment handling and email reminder systems.
- Fine tuned LLMs for call analysis and review, optimizing business processes with AI solutions.
- Utilized machine learning models and vector embeddings for an image similarity project using ResNet to improve visual data analysis.
- Built a WhatsApp AI Messaging Agent powered by a RAG pipeline, trained on each client's own business data to handle real customer queries end-to-end cutting response times by 60% and reducing manual support workload by 40%, letting clients focus on growth instead of repetitive conversations.

Clothwari Printing Private Limited **June 2024 - Sep2024**
AI Developer *New Delhi, India*

- Specializing in fine-tuning Large Language Models (LLMs), developing and optimizing chatbots using Crew AI.
- Extensive experience in deploying various ML models, with a focus on LLMs and AI-driven bots/agents to enhance automated workflows and customer interactions.
- Built an automation for generating different designs based on client requirements, boosting daily design productivity by 70%.

Projects

Deep Researcher | ***Python, Ollama, Deepseek, Tavily***

- Developed Deep Researcher, a fully local web research assistant that uses any LLM hosted by Ollama to generate web search queries and summarize results.
- Implemented a feedback loop to identify knowledge gaps, refine search queries, and improve summaries over multiple cycles, delivering a final markdown summary with all sources used.

Jira Issue Resolution Agent | ***Python, LLM Agents***

- Built an agentic system integrated with Jira that picks up tickets for production apps and platforms, investigates how each issue occurred using stack traces and logs, identifies the root cause, and attempts a fix.
- Enforced guardrails limiting the scope of changes the agent can make autonomously, with human supervision required beyond those limits.
- Helped resolve 20% of our monthly Jira tickets, reducing manual debugging effort for the team.

Compliance Intelligence Platform | ***Python, RAG, Vector Embeddings, LLMs***

- Built a compliance AI agent trained on publicly available regulatory data, giving compliance professionals one portal for the latest updates across services.
- Tracks regulatory changes across bodies such as BIS, FSSAI and trademarks, so users get current information without checking each source separately.

Skills

- **AI/ML Architectures:** Generative Adversarial Networks (GANs), CNNs, RNNs, LSTMs, Transformers, BERT, GPT, Large Language Models (LLMs), Fine-tuning Pretrained Models, Transfer Learning, RAG, Agentic AI, Multi-Agent Systems, Model Quantization.
- **Data Science/Machine Learning/Deep Learning :** Regression, Classification, Decision Trees, XGBoost, Clustering, Model Evaluation.
- **Python packages & Frameworks :** FastAPI, GeminiAPI, Tensorflow, Keras, Pandas, Pyspark, Beautiful soup, spaCy, NLTK.
- **Automation & Web Scraping :** BeautifulSoup, Selenium, Scrapy, Web Scraping, Data Extraction, Web Crawling, Automation Scripts, Integrating AI Models for Dynamic Data Extraction, Automating Tasks with AI Powered Decision Making.

- **Containers and Deployment :** Git , Netlify, Docker, AWS.
- **NLP :** Langchain, Streamlit, Chainlit, GPT, BERT, T5, LoRA, Tokenization, Named Entity Recognition (NER), Text Classification, Sentiment Analysis, Language Modeling, Question Answering, Chunking Strategies.
- **Other Skills :** Speech Recognition, Model Deployment , Anomaly Detection , Voice AI , TTS, Automatic Speech Recognition (ASR), Webhook Integration , REST API.

Achievements

- Achieved first rank in KIMO technical competition held in 2023 and 2024.
- Ranked within the top 10 participants in a strategic competition organized by Shailesh J. Mehta School, IIT Bombay 2023.
